PLAY ROCK ROLL

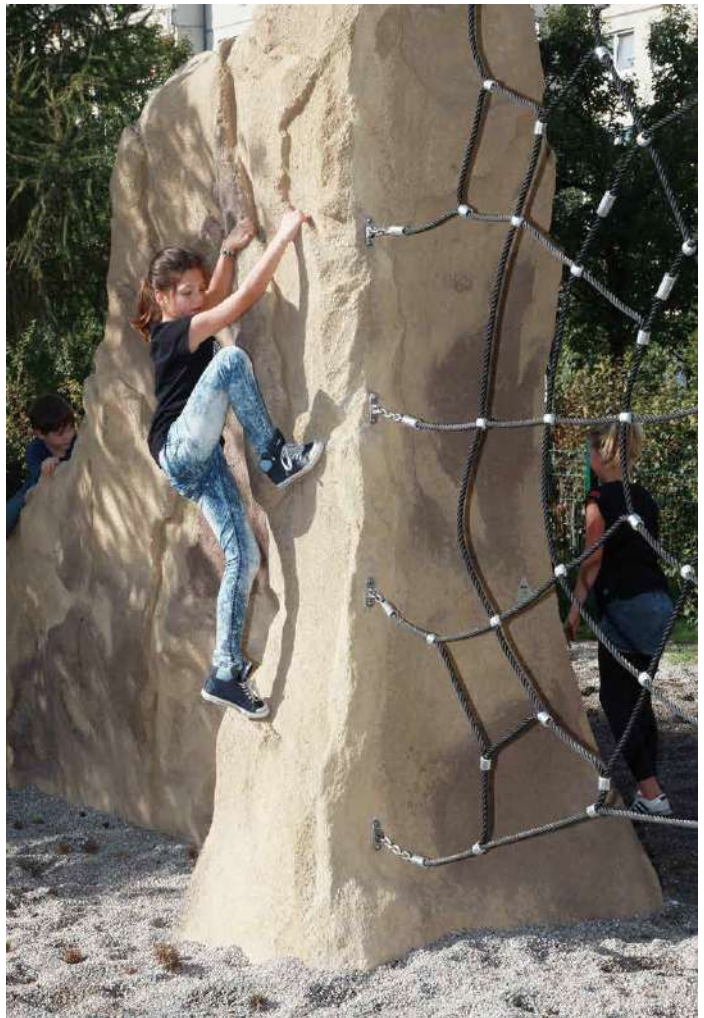

Climbing is one of the best ways to stay active. In addition to running, hopping, jumping and throwing; climbing is a fundamental form of human motion.

Using the ROX units for climbing can help enhance:

- Strength
- Stamina
- Mobility
- Coordination (especially balance & orientation)
- Concentration
- Judgement in risk-taking
- Confidence

Beginners can use the climbing hand and footholds that are attached to the surface, whereas more experienced or confident climbers can progress their skills by using only the hand crafted rock finish. The surface on the products has a relatively rough finish which is ideal for climbing.

Each unit is designed by a sculptor and created in a way that the user can climb in a vertical or horizontal direction. ROX can also add significantly to the aesthetics within the environment with their organic and stylish look.

The 9 varying rock combinations invite users to challenge themselves without the risk of loose falling rocks.

The walls are a maximum 2.5m high and come with a pre-formed foundation base making them easy and cost effective to install.

All units are highly durable and robust which makes them vandal resistant and guaranteeing years of fun.

ROX products are ideal for:

- Recreational play & sports areas
- Schools
- Visitor attractions
- Shopping centres

Tyrellstown Dublin

For this exciting project we have created along with our partners (X-Move) the exciting unique “Tyrellstown Castle”.

This castle is constructed from concrete which is sculpted in jet crete to resemble an historic castle. Children can enter this adventure by climbing down the mound and on to the castle rampart and traverse the towers to escape by the slide or fireman’s pole. This rugged structure is designed to withstand heavy use and provides a challenge to scale the climbable walls on all sides. Off to one side you can traverse the spiders web net and bolder around rugged sandstone Climb Wall.

Stradbally Laois

This unit delivers a total of five different and challenging play experiences. Crawling, Balancing, Climbing, Jumping, Fitness and not forgetting, running around and having fun.

Its compact arrangement encourages social interaction and sharing fun as well as a multiplicity of physical exercises. Suitable for up to 8 users at once.

ROX Installation

The installation of the ROX units is very easy! One crane lift is required per unit for placement via two lifting eyes which are then removed and filled with mortar. Climbing grips are fixed with stainless steel anchors and special TORX with PIN screw in the walls before delivery.
